

SQL Server Sample Database Setup

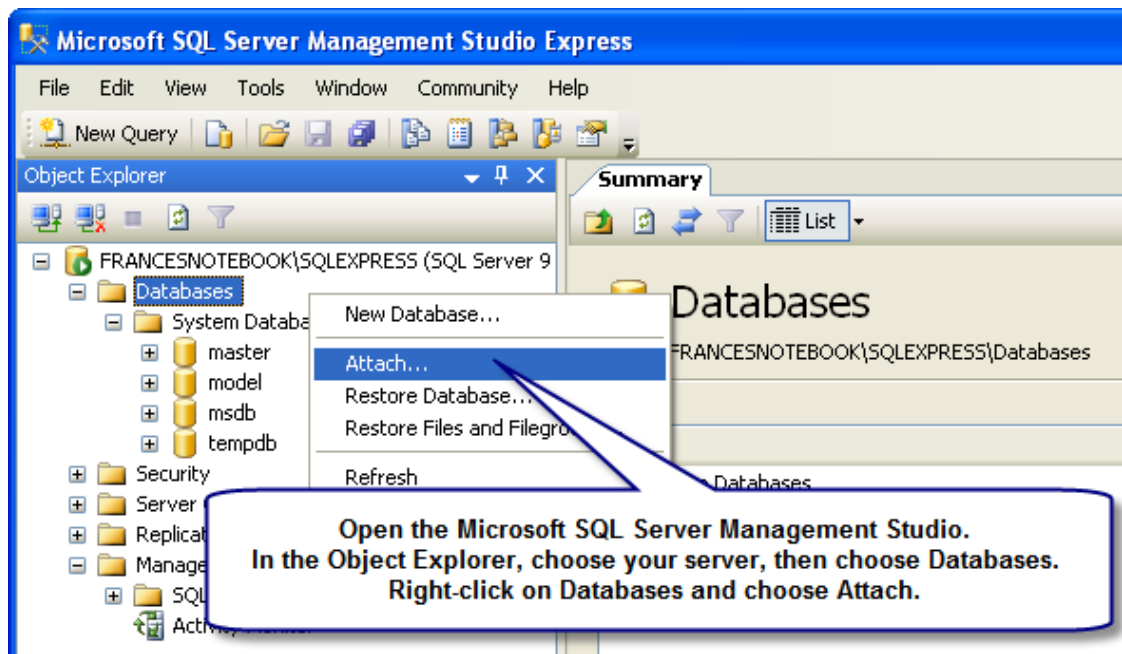

In addition to Alpha Five Version 9 and the Alpha Five ATEC2008_SQLWebApps database, the exercises and examples in the “Developing Web Applications with Microsoft SQL Server - What you need to know” presentation use:

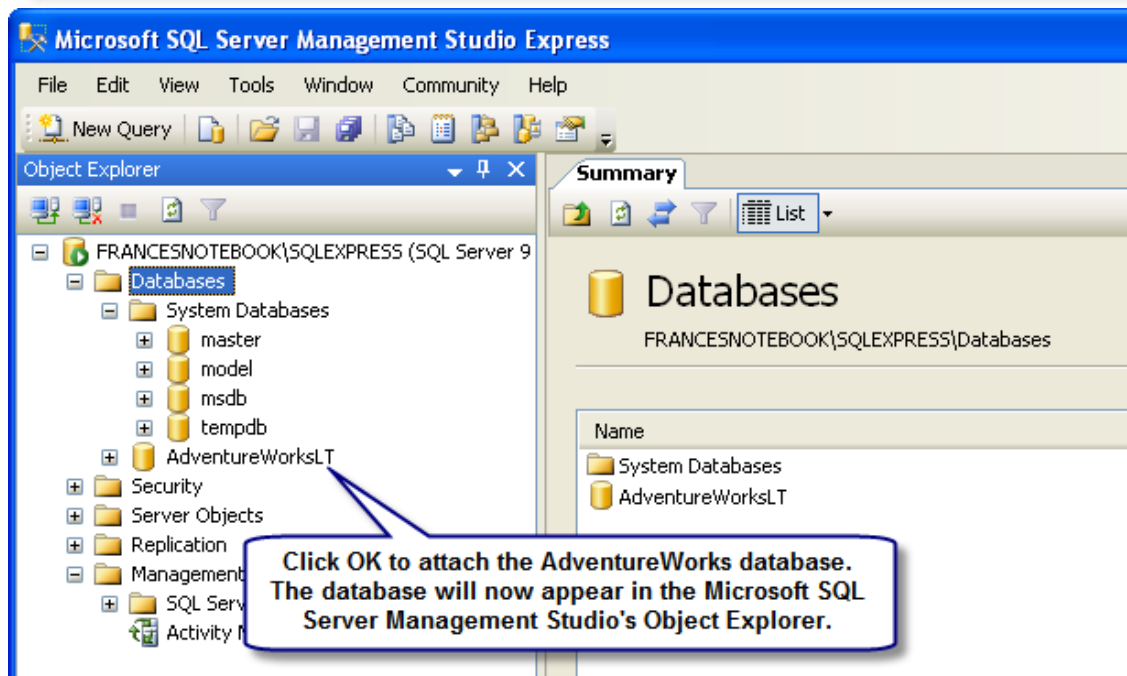

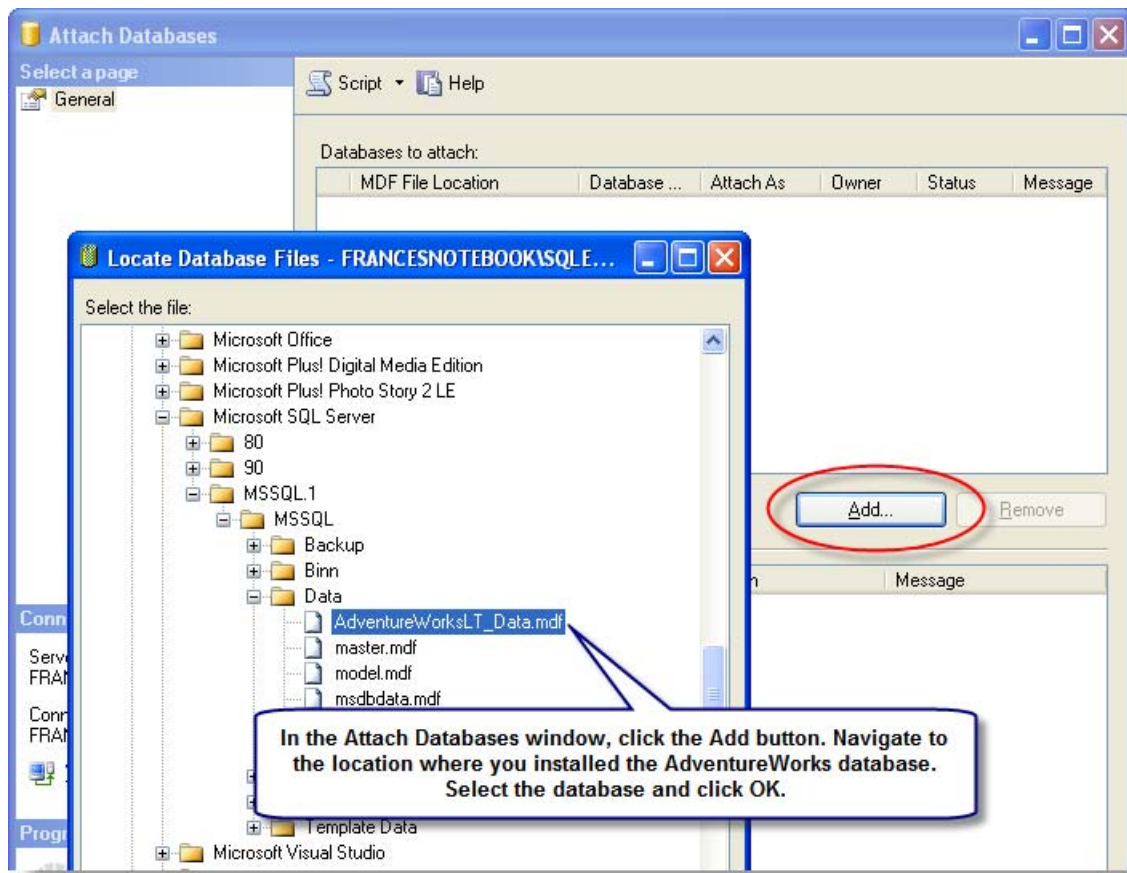

- Microsoft SQL Server 2005
- Microsoft SQL Server Management Studio
- The AdventureWorksLT Sample Database

If you do not have Microsoft SQL Server, you can download and install the *free Microsoft SQL Server 2005 Express Edition* from <http://www.microsoft.com/downloads>. You will need the Microsoft SQL Server 2005 Express Edition “with Tools” or “with Advanced Services”. When you install Microsoft SQL Server 2005 Express, be sure to install the Microsoft SQL Server Management Studio Express too.

The *free Microsoft SQL Server sample databases* are available from CodePlex. <http://www.codeplex.com/MSFTDBProdSamples>. You will need the AdventureWorksLT sample database for SQL Server 2005. The file to download and install is AdventureWorksLT.msi.

After installing the AdventureWorks database, you must attach it. Follow the steps in the screenshots below.

You are now ready to do the exercises in the “Developing Web Applications with Microsoft SQL Server - What you need to know” presentation.
